Circle Joint Pliers

Greater Strength

Greater Cutting Power

Longer Life

THE biggest stride forward ever made in the construction of lineman pliers. A new and different type of joint, consisting of three sections, gives strength and rigidity that *you can't get in ordinary riveted joint pliers.*

The broad bearing surfaces of the three sections, joined by a special assembling operation, form *a single unit of tremendous strength.* No soft steel rivet to work loose. No weak point to "give" under stress of rough usage.

This re-enforced construction gives Circle Joint Pliers the structural strength to withstand hard blows and twisting strains, in that way insuring long life. It also insures *an easy riding joint.* Lastly, Circle Joint Pliers don't get out of adjustment—the cutters are held *in true alignment—permanently.*

Like all VACUUM GRIP Pliers, they are hammer-forged from electric furnace alloy tool steel, individually hardened in liquid heat process and electrically tempered *thru and thru,* NOT CASE-HARDENED.

GUARANTEED to give 100% satisfactory service or purchase price refunded. Order a pair today. We pay parcel post.

PURCHASING AGENTS: Send for samples for your men to use in running tests. Write for catalog Y-8 showing over 40 patterns and sizes for all jobs.

Lineman Pliers

YOU can't stop to "coddle" and "baby" your tools when you're right in the thick of a tough job that calls for all your strength and skill. That's when you want pliers with real stuff in them.

Slip a pair of Vacuum Grip Lineman Pliers in your belt and you'll never worry about your pliers breaking down. Rough treatment has no effect on them —*because they're built to new standards of durability!*

Made of special Molybdenum alloy tool steel; hammer forged; hardened and tempered *thru and thru*—NOT SURFACE-HARDENED (Case Hardened). Powerful gripping jaws—cutters that stay in alignment—smooth-riding joints.

PURCHASING AGENTS: Order samples for running tests. Write for Catalog Y-13, showing over 35 patterns and sizes.
